Lab 6 – Microcomputer Arithmetic

Copyright © 2011-2016, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

Introduction

For this laboratory assignment you write an assembly program to implement a 32-bit calculator using the CV-8052 soft processor and the 7-segment displays available in the DE0-CV board.

Components Required for this Module

For this assignment you will need an Altera DE0-CV board with the CV-8052 soft processor installed. Also you will need A51 and Crosside to compile and download your program to the processor.

Laboratory Assignment Requirements

1. Download, compile, and run the program '*Read_sw6.asm*'. This program reads SW0 to SW9 in the Altera DE0-CV board and displays the input number into the seven segment displays HEX0 to HEX5. For example, to enter the number 3478, toggle on and off the following switches: SW0, SW0, SW3, SW4, SW7, and SW8. The number 003478 will be displayed in the seven segment displays.
2. Write the assembly program for a calculator with the following operations: addition, subtraction, multiplication, and division. The calculator should work with unsigned 32-bit binary numbers, where both the input and output are in decimal. The numbers are input by toggling switches SW0 to SW9 on/off. Assume KEY3 is the '+' button, KEY2 is the '-' button, and KEY1 is the '=' button. Since there are not enough buttons to assign multiplication and division, use KEY0 as a shift key: if KEY0 and KEY3 are pressed, the operation is '*'. Similarly, if KEY0 and KEY2 are pressed, the operation is '/'. Display the number in decimal using the seven segment displays HEX0 to HEX5. To speed up the development of your program, a collection of 32-bit arithmetic functions similar (if not identical!) to those studied in class is provide for you to use. You can find the file in the course web page under the name '*math32.asm*'. A program that demonstrates the use of the functions in '*math32.asm*' is also provided under the name '*math32test.asm*'.
